Running Two Farms.

The statement that "migratory farming belongs to men and not to human derelicts," made by a writer in the Independent, is one to catch the fancy, and the idea is finely perhaps—thinly if any number of the people who believe they have a mission to reform farming see a possible solution of the problem of farming with profit and pleasure at the same time in the scheme of one farmer running two farms. This the writer in the Independent says can be done by one hand running a farm in the far south and another farm in the north. That the forced idleness on a northern farm in winter and the depressing heat of summer in the south will both be avoided.

The scheme figures out right on paper. Perhaps hired help can be depended upon to look after the work at either end while the farmer is out the other job. Possibly such help can be had without eating up all the growing season's profits. But in this case we would doubtless see one farmer running a chain of farms in the south and another chain of farms in the north, with crops in the ground all the time. However, nature is bound to have something to do with the matter of the physique of the farmer as well as with the crops he puts in the ground. It is a notion hard to combat that the northern bred man in the north should freeze up with nature in the winter and thaw out with it in the spring. Man in the south must be accustomed to be well, and to thrive best when he remains right where his physique is at home. Moreover, the small farmer, whether north or south, works overtime during the growing season and needs a rest for recuperation quite as much as the soil which he tills. Nature must rest, and the farmer who refuses to take the big chances on health and endurance for the next campaign need.

Germany and the Airship.

The victory of the German balloons in the international race of last year was no accident. Starting from St. Louis, he aimed for New York and landed just a little south of it after traveling almost in a bee line for the goal. The Germans have maintained a school of aeronautics for two years, and although they do not seem to have a press agent to keep their records and new inventions in the limelight, as do the French, the nation is really up to date if not a little ahead in the matter of practical aeronautics.

France, it is well known, has special attention to military ballooning and to the development of the airship for use in war. Apparently Germany is not behind her rival in the effort to master this new adjunct to military armament. She is manufacturing guns of a peculiar pattern for use in the air, and has a system of wireless telegraph adapted to balloons. The parliament appropriated \$600,000 recently for airship experiment and construction, and confidence in aerial navigation is not confined to the government. Several large airship corporations have come into being in Germany. Having so good a start, the Germans will be hard to rival and will hardly be beat in that era predicted by the poet when the nations ally their navies graphic in the central blue.

Castro is making an excellent line of advertising against the day when he may come to this country and have his name enrolled among the high priced platform stars who are out for the stuff.

Insanity is to be the plea advanced by the Korean who killed Diplomat Stevens in San Francisco. How quickly the alert foreigner picks up American methods.

There may be nothing royal about the American multimillionaire, but it is his fish catches that please European princes who need the money.

By arranging to buy houses for diplomatic representatives this country will enable Europe to set its real estate as well as art treasures.

If you are

wanting jewelry that adorns, watches that will give correct time, alarm clocks that will awaken you in the early hours of the morning, you can find the needed articles at my jewelry store.

Repairing a specialty.

A Bright Side.

All the money and blood of the Goidals and Vanderbilts are not tainted by the follies of the few representatives of these families. Helen Gould has laid the foundation of noble deeds which will be an earnest to beat back the waves of scandal set in motion by the follies of her reckless brother and sister. Now Consuelo Vanderbilt, the Duchess of Marlborough, has turned from a dazzling career to engage in the work of uplifting humanity. Recently she told the rich women of New York and of all America, for that matter, to cease squandering money for luxuries and devote it to the needs of their less fortunate brothers and sisters.

The example of Helen Gould and the wise counsel of Consuelo Vanderbilt are much needed by many women of wealth today. That form of vulgar display in the expenditure of wealth which has grown amazingly in the last few years has no excuse for being. A liberal use of wealth is right, but lavish dissipation finds imitators among those who can ill afford it, leads to bankruptcy for the many and impoverishes upon the masses the false idea of that smartness and vulgarity are the highest good. Human nature is weak at best and needs no example in high places to stimulate its follies.

The best type of high society is that of the old New England regime, which holds wealth in stewardship to be devoted to noble ends for the benefit of large numbers. This type is not now confined to any section, but it is a pleasure to find a Gould and a Vanderbilt conspicuous among the noble workers for humanity.

A Movable North Pole.

Captain Amundsen located the magnetic pole in some out of the way place, and now an English theorist is convinced that the north pole has shifted from its supposed moorings. That is to say, if the calculations of all the known explorers down to Peary have been correct there is no likelihood that a man extending his tracks toward it, the fruit would strike the pole. This is because it has been shifting eastward for years and now keeps moving. Eventually he thinks it will be in Siberia. If it has anything to do with sending blizzards down the American continent we shall gladly make a bet near a present of this cold storage plant.

It is doubtful whether this ingenious Englishman's theory will cause a lessening of exploration parties. Men will be just as crazy to prove that the pole is not there as they have been to prove that it is there. Perhaps some daring party will make a permanent camp on the alleged roof of the pole's travel and wait for it to come around. It is said that accumulations of ice are responsible for the shifting of the pole. Eventually it will occur to somebody to dynamite the mountains of ice to make it flow away faster and thus force the pole to move on. Another idea would be to concentrate powerful aerial currents of electricity upon the ice and melt it. Anyway, if the pole is movable something is doing it, and the theory opens up a beautiful field for speculation in the domain where old notions have long been exploded because nobody could prove them.

The money taken back to Italy, Russia and other countries from which the stream of immigration has flowed to the United States most freely during recent years by returning emigrants is having a remarkable effect, and if the signs are not deceptive on the first appearance of a return of prosperity we shall be overwhelmed with new waves of immigration. It is related that the knowledge that some emigrants who in a couple of years saved enough to carry home with them as much as \$500 in gold has created a tremendous excitement and that in villages every able-bodied man who can scrape passage money together means to do so and will invade the promised land.

After having been locked up in Arctic ice for more than sixty years Sir Robert McClure's famous exploring ship, the Investigator, is reported once more afloat. The vessel was abandoned in 1854 on the northern shore of Banks Land. She is reported in good condition, even her supplies and instruments having suffered no great deterioration. It is expected that she can be towed to Alaska and eventually returned home.

The foreign demand for American heliograph is so strong now and the supply so limited that it takes a year to get a hearing where any sort of countlet used to do.

The most enthusiastic supporter of the Monroe doctrine will hardly deny that a little coaxing may be a good thing for Haiti and for everybody concerned.

Every time the president gets hold of a coin bearing the motto he will be reminded of another trust that refused to stay busted.

The more belt our warships have the more belts they can take from the enemy without being done up.

CHURCH DIRECTORY

METHODIST EPISCOPAL CHURCH
Cook Street near South Hawley Street.
Sunday Services:
10:30 a. m. Preaching

Woman's Missionary Society, second Thursday of the month at 4 o'clock.
A cordial welcome for all.
J. WISNER, Pastor.

Stay "West," Young Man!

It is natural for young men with no capital but energy to turn their eyes toward China as a land for business adventure. With all the nations standing guard over the empire as a home for rich picking some day, it seems to be just the place for pioneers to plant their stakes, and the sooner the better. But there is another side to it, and one of our consular officials recently lost him a warning to young men to stay in the west. China as a field for muscle and brains alone is more than overdone. Foreigners who fill landless and pebble positions in China are specially trained for their work. They are so well taken care of that practically "few die and none resign."

The social ideal in the far east is set forth by the consular official in the strongest terms. There is no such thing as working up from the bottom round to a position of dignity. Officials, professionals and business men look down upon all who are "outside" of their class and refuse to associate with them in social clubs and in various forms of recreation. Promotion beyond a certain grade is impossible for one who begins on the fringe.

Furthermore, this report says that climatic conditions are most trying and that it is next to impossible for a stranger to get on without adopting the custom of continuous liquor drinking, which is prevalent throughout the entire east. Finally there is a better opportunity in America for business, for social life and for progress in self education than anywhere in the orient. The Chinese themselves are eager to fill all the positions usually allotted to boys and young men here and do it for what an American would consider a pittance.

China is moving steadily toward the goal of industrial independence. Her great effort in that direction is to establish a government printing office so that there will be no necessity of drawing upon foreigners for such things as postage stamps, stamp duty certificates, bank notes and other official papers. There is no doubt if they set themselves to it the members of a governmental printing establishment in China can give some other nations points in economy of production.

Mr. Winston—I think your husband is a swine! But why is it that you never laugh at his jokes? I have often noticed this.

Mr. Clapper—He always tries his jokes on me. I hear the very best ones first before he brings them in company.—Cleveland Leader.

Visitor—I hear you have been very ill, Nettie. Did you suffer much?
Nettie (aged five)—Yes, ma'am! I enjoyed a awful lot of pain.

GARDEN, LAWN AND LANDSCAPE

Flowers are the poetry of nature, but it takes the soul of a poet to bring forth their full beauty and harmony.

Any art consists in concealing the fact that it is an art. The lawn or landscape effects that appear too palpably artificial do violence to this rule. They should carry with them a full nature, not defeat and deny her.

In preparing a vegetable garden care should be taken to obtain a rotation of crops. This is economy, both of labor and money. It is not wise to sow the same crop too often in the same bed. Even about so that your ground is busy all the year.

It is a mistake to cover flower seed to a great depth. Sow on the surface, scatter on a very thin layer of fine dirt and press down gently. Sprinkle lightly with water immediately after planting. This may be saved with small flowers, as with most vegetables, by sowing in hotbeds.

Hotbeds for the most part should be made in March or earlier, but it is not yet too late. If extensive beds are not required, window boxes may be used. Plenty of light should be given the plants, but too long exposure to direct sunlight should be avoided, especially if the day is warm.

Our old reliable friend the pansy is still a prime favorite. It may be sown any time now. If earlier blossoms are desired, procure plants for setting out from the florist. Keep the ground stirred and the flowers closely picked, and the pansy will do the best, furnishing blossoms all summer.

Those who love roses may now have them the season through. By the right sort of selections it will be possible to have some variety constantly in bloom. The soil should be deeply spaded, well drained and thoroughly mixed with well decayed manure. The roses should be well watered every day.

The National Council of Horticulture is doing good work in sending out articles for general use throughout the country. Its object is to spread education on the general subject of gardening and especially on the raising of flowers. Acknowledgment should be sent for several valuable hints and suggestions.

In setting out plants avoid ground that is heavy or that will bake. He who would be a successful gardener will find no royal road except that of work. The ground must be thoroughly prepared. It is important that there be no water allowed to stand. If the land is not of a slope that will carry off the water, tile or other drainage should be resorted to. If possible ground should be selected sloping to the south or southeast.

The soil of the flower garden, like that for vegetables, should be well fertilized, thoroughly worked, loamy and light. It is important that there be no water allowed to stand. If the land is not of a slope that will carry off the water, tile or other drainage should be resorted to. If possible ground should be selected sloping to the south or southeast.

of yellow in a bed, golden California poppy; for side and back fences, holly hocks; in front of fence in back yard garden, dahlias and cosmos; for a sunny position in the garden, a few poppy chrysanthemums; for a low growing flower in mass, Drummond phlox.

The lilac is popular for many reasons, one being that, like the holly, it will thrive under almost impossible conditions. No amount of ignorance and neglect on the part of the gardener seemingly will kill it. The lilac obeys the Scriptural injunction of returning good for evil, for, however it is abused, it still blossoms sweetly for its tormentors. The lilac will grow in pretty nearly any kind of soil, and practically everybody thinks he knows how to raise it. Yet rich soil, intelligent planting and careful attention will not be without their reward even in the case of this hardy and good natured shrub.

Kalcebs—Think women should smoke! Boker—Think what awful cigars the dear things would give each other.

New York Sun.

He Got What He Needed.

"Nine years ago it looked as if my time had come," says Mr. C. Parrington, of Mill Creek, Ind. Ter. "I was so run down that life hung on a very slender thread. It was then my druggist recommended Electric Bitters. I bought a bottle and I got what I needed—strength. I had one foot in the grave, but Electric Bitters put it back on the turf again, and I've been well ever since." Sold under guarantee at Barrington Pharmacy, 52c.

Canada's Cash Road Tax System.

Canadian townships, particularly those of the province of Ontario, are adopting the cash road tax system in place of the antiquated method of working out the road tax, which is in too many cases a farce, says the Good Roads Magazine. Supervision of the work on the roads is intrusted to from one to four responsible commissioners, who use labor saving machinery, build better bridges than the roads had and make the highways permanent and durable. During the decade from 1900 to 1905 the outlay on county roads of Ontario amounted to \$21,000,000. Of this \$10,422,000 was cash, and \$10,578,000 represented days of statute labor. This equaled an average of \$2,100,000 per annum and included the expenditure by the townships and a part only of that made by counties on their country highways. Cities and towns spent a large amount in addition to the above sums. The good roads movement is said to be extending widely in Canada.

A Twenty Year Sentence.

"I have just completed a twenty year health sentence, imposed by Bucklen's Arnica Salve, which cured me of bleeding piles just twenty years ago," writes O. S. Woolverton, of LeRayville, N. Y. Bucklen's Arnica Salve heals the worst sores, boils, wounds and cuts in the shortest time at Barrington Pharmacy.

Quality and Price

THE test is after all the quality test. Sometimes (OFTEN in our case) it pays to investigate prices which are so low that it seems as if there could be no quality. It never pays to pass up a good thing, merely because you imagine that it is

poor. Look it up and find out for yourself. Note the following, from all departments, guaranteed to be

Low Priced But Good

- Full width Black Saten Petticoats 40c
- Ladies' dark colored Cotton House Skirts.....40c
- Men's all silk Neck Ties.....10c
- Best quality Calicoes and De Tennis Flannel Remnants, per yard.....5c
- Girls' Slippers and Shoes, Tan or Black, 8 and.....90c
- Men's or Women's Black or Tan Hose, per pair.....50c
- Infants' Fancy White, Pink or Blue Hose.....50c
- Men's fine quality Black Melton Cloth Suits.....\$7.15
- Ladies' Blue Serge Suits, all wool \$2.98
- Light Mixture Suits, \$1.98 and.....\$9.49
- Good Pearl Buttons, 2 dozen for.....5c
- Men's good style Solid Leather Calf Shoes.....\$1.75

Children's Summer Clothes

- Boys' Wash Suits, Blues, Browns, Whites, Stripes, Checks, etc. 49, 57, 67, and.....98c
- Little Girls' Best Quality Bowler Suits, Blues, Pinks and Browns.....75c
- Girls' Fine White Lawn Dresses, 69c, 87c, 98c, \$1.19, \$1.49 to.....\$2.98
- School Dresses, Calicoes, Gingham, Percales, etc. all styles and colors, 49, 75, 89, and.....98c

Special Waist Sale

This week big values in Ladies' Waists. Fine White Lawns, open either front or back, beautifully made, with lace and embroidery trimmed fronts and yokes \$7c, 98c, \$1.19, \$1.49 and.....\$1.40

Right Values in fine White Silk Waists \$1.98 and.....\$2.87

If you want a waist, do not fail to see these we offer this week.

Ladies' Suits.

Tailored Suits, light greys, fancy mixtures, etc. special lot of 20. Well made throughout, with silk lined Jackets \$2.98, \$3.45 and.....\$4.98

Elegant Tan, Blue, Brown and Black Suits, like Panamas, Violets, etc. beautifully made \$10.65, \$15.69 and.....\$19.65
