PURE WATER SUPPLY VITAL.

Health of a Community is Very Largely Dependent Upon It. Too many precautions cannot be taken toward guarding the water supply of a town. Along this line Edward Wegmann says in the Metropolitan Magazine.

The health of a community depends largely upon the purity of its water supply. Formerly it was thought that water in which chemistry failed to find any noxious elements was fit for domestic use, but in recent years the science of bacteriology has demonstrated that such water may contain the germs of dangerous diseases. These germs increase very rapidly in number and are often communicated by the contamination of a source of water supply from one infected person to a whole community. Such a case occurred in 1884-5 in Plymouth, Pa. A man who had contracted typhoid fever in Philadelphia was nursed during the winter in a house near a mountain brook which flowed into a river from which Plymouth derived its water supply. The refuse from the sickroom was thrown on the snow near the house without being disinfected. As cold weather does not kill disease germs, the typhoid germs were washed in this spring by the melting of the snow into the mountain stream referred to above, and as a consequence more than 1,000 cases of typhoid fever and about 100 deaths from this disease occurred in Plymouth, these cases being all confined to persons drinking the polluted water.

In 1862 Hamburg, Germany, was visited by a terrible epidemic of cholera. This city derives its water supply from the river Elbe. At the time of the epidemic the river water without being filtered was used for domestic purposes. It has been proved beyond question that the germs of cholera were communicated to the city's water supply by throwing into the river the excreta of a sailor who was sick with cholera on a vessel anchored in the Elbe. Nearly 10,000 persons died of cholera in Hamburg during this epidemic, but in Atlanta, a suburb of Hamburg, using Elbe water that had been filtered through sand, not a case of cholera occurred that could be traced to the drinking of the unfiltered water of Hamburg.

Genius. Providence seems to be generous and at the same time economical in the matter of providing men and women of genius to a gaping world. Economical because such "Erbengelungen" are rare, generous because every human being, to whatever generation he belongs, will probably have a good fortune during the span of his years to watch a portion of the transit of some great comet.—National Review.
